In the Claims

Please replace all prior versions, and listings, of claims in the application with the following list of claims:

1. (Previously Presented) A composition comprising
 - (a) a nucleic acid molecule encoding a fusion protein comprising
 - (aa) a glutathione S-transferase (GST) (poly)peptide that enhances solubility and/or prevents aggregation of said fusion protein; and
 - (ab) a huntingtin (poly)peptide that has the ability to self-assemble into fibrils or protein aggregates, wherein connection of polypeptides (aa) and (ab) is via a linker or by a direct attachment, and wherein at least one of the linker, (poly)peptide (aa) and (poly)peptide (ab) includes a cleavable site, and wherein said huntingtin (poly)peptide self-assembles subsequent to release from said fusion protein,
 - (b) a vector containing the nucleic acid molecule of (a);
 - (c) a host transformed with the vector of (b); and/or
 - (d) a fusion protein encoded by the nucleic acid of (a).
2. (Previously Presented) The composition of claim 1 wherein the huntingtin (poly)peptide comprises a polyglutamine expansion.
3. (Original) The composition of claim 2 wherein said polyglutamine expansion comprises at least 35 glutamines.
4. (Original) The composition of claim 3 wherein said polyglutamine expansion comprises at least 51 glutamines.
- 5-8. (Cancelled)
9. (Previously Presented) The composition of claim 1 wherein said nucleic acid is DNA.
